Summary

☒ Back up to a hard disk that is dedicated for backups (recommended)

Choose this option for the safest way to store backups. The hard disk that you use will be formatted and then dedicated to only store backups.

☐ Back up to a volume

Choose this option if you cannot dedicate an entire disk for backups. Note that the performance of the volume may be reduced by up to 200 percent while it is used to store backups. We recommend that you do not store other server data on the same volume.

☐ Back up to a shared network folder

Choose this option if you do not want to store backups locally on the server. Note

Select Destination Disk

Select Destination Disk

Select one or more disks to store your backups. You can use multiple backup disks if you want to store disks offsite.

Available disks:

Disk	Name	Size	Used Space	Volumes in D...
☒	VBOX HAR...	50,00 GB	16,00 MB	

Show All Available Disks

On the wizard page (by default), only the disk you are most likely to use is shown. In the list below, all the disks that are attached to this server are shown, both internal and external disks. The list excludes critical disks that contain system files, and cluster shared volume disks.

Select the check box for a disk to make it appear in the list of available disks in the wizard page.
